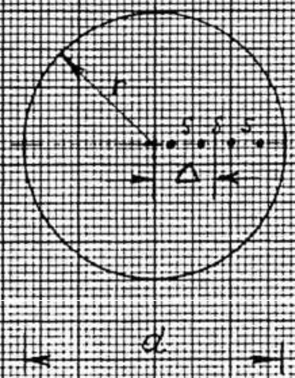
Thin, circular slice.

$$\rho = G \frac{V}{I}$$

$$G \approx \frac{\pi}{\ln 2}\, t \cdot C_1\!\left(\frac{\Delta}{d}, \frac{d}{s}\right)$$

$$= \frac{\pi}{\ln 2}\, t \cdot C_0\!\left(\frac{d}{s}\right) \cdot K_1\!\left(\frac{\Delta}{d}, \frac{d}{s}\right)$$



thickness $t < \frac{s}{2}$
